Participation in the Ici on Sème Agroforestry project

"Ici On Sème" is PUR's French project, which places farmers at the heart of its initiative. It aims to address the top priorities of farmers and foresters in order to make their land more resilient to climate change.

Since 2022, thanks to the passenger contributions starting from 2021, Corsica Ferries has been supporting this project. This project aims to reintroduce trees into France's agricultural landscape while increasing natural carbon sinks.
